Experiment -1

AIM: To create an AWS free tier account to provision the resources.

Description:

Amazon Web Services (AWS) is a cloud computing platform that provides services such as computing, storage, databases, networking and security over the internet. These services are accessed through the AWS Management Console, and users pay only for what they use.

AWS Free Tier provides eligible users with free usage benefits or credits for selected AWS services, subject to applicable limits and conditions. A new AWS account can therefore be used to learn and experiment with cloud services at little or no cost.

The AWS account can be used to access services such as:

1. **Amazon EC2:** Provides virtual servers in the cloud.
2. **Amazon S3:** Provides cloud storage for files and objects.
3. **Amazon VPC:** Provides a virtual network for AWS resources.
4. **AWS IAM:** Manages users, roles and permissions.
5. **Amazon CloudWatch:** Monitors AWS resources and applications.

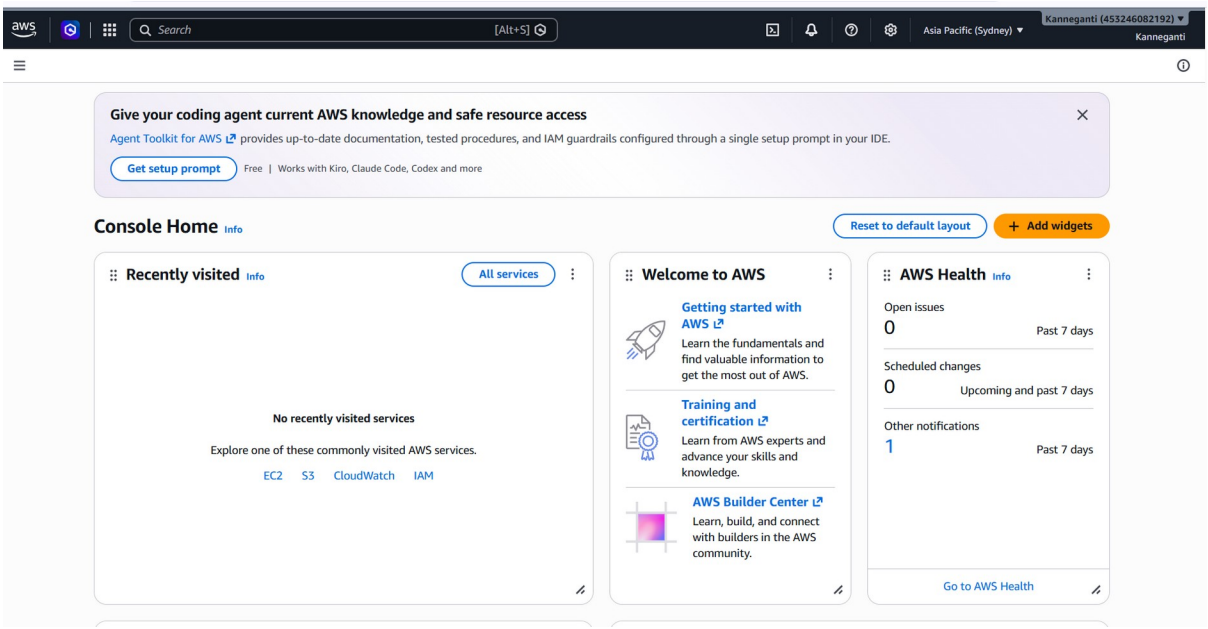

Steps:

1. Open a web browser.
2. Visit the official AWS website: https://aws.amazon.com/
3. Click on Create an AWS Account.
4. Enter a valid email address and the AWS account name.
5. Verify the email address using the verification code received.
6. Create a password for the AWS account.
7. Enter the required contact information.
8. Select the appropriate account type.
9. Enter the required payment information.
10. Complete the identity verification process.
11. Select the appropriate support plan.
12. Complete the account registration process.
13. Sign in to the AWS Management Console.
14. Open the AWS Management Console and select a region.
15. Explore the available AWS services such as EC2, S3, VPC and IAM.
16. Check the AWS Free Tier or Billing dashboard to monitor usage and charges.

Output:

The AWS account was created successfully and the AWS Management Console was accessed after signing in.

The account is ready to explore and provision eligible cloud resources such as EC2 instances, S3 buckets, VPC networks and IAM users.

Result: Thus, an AWS account was successfully created to access cloud services and provision cloud resources.
